

Standard Offer Avoided Cost

updated December 2021

Tri-State’s current standard offer avoided cost (composite value on a \$/MWh basis reflecting monthly off-peak and on-peak pricing) for projects of 1.0 MW or less is as follows:

2022	\$23.84
2023	\$21.79
2024	\$20.88
2025	\$18.27
2026	\$21.20

These figures are calculated using hourly chronological production cost methods to determine the hourly decremental cost of the Tri-State generation fleet.

Avoided Cost for projects with a nameplate capacity rating greater than 1.0 MW will be made available upon request with the results influenced by the size, location and operational characteristics of the proposed Qualifying Facility as well as by recent auction (RFP) results.
